The TurfCutter TC350H from SMG: The innovation in artificial turf cutting

The TurfCutter TC350H - the world's only self-propelled device for precise cutting of artificial turf during construction. Discover the revolutionary technology behind the TC350H.

From bottom to top: the perfect cutting method

The TurfCutter TC350H sets itself apart from conventional saws by sawing from bottom to top. This unique sawing process enables precise cutting of the artificial turf, regardless of whether it is filled or unfilled. The "bottom up" process further minimizes wear on the saw blade and increases the working speed at the same time.

Height adjustable sword for safety and control

The height-adjustable sword of the TC350H offers safety for the substructure by guiding the artificial turf to the saw blade in a controlled manner and at the same time preventing sawing into the base layer. This innovative function ensures precise and safe cutting guidance.

Telescopic dipstick for precise cutting results

The dipstick of the TC350H can be telescoped to 2 meters and swiveled through 180°. This feature enables precise transfer of the previous cut to the next cut. With strips of up to 2 meters, exact cutting results are achieved that are prepared for further processing steps with the SMG TurfWinch or the SMG TurfMuncher.

Powerful and compact

With a weight of only approx. 150 kg and an extremely compact design, the TurfCutter TC350H is easy to handle despite its high performance. Powered by an 8.2 hp gasoline engine, the TC350H offers hydraulic drive in both directions, allowing for stepless control. A trolley can optionally be attached, which allows the operator to ride along and further increases mobility.
